## EDUCATION

---

**University of Colorado Boulder**

*Bachelor of Arts in Computer Science*

**December, 2022**

*Boulder, Colorado*

## TECHNICAL SKILLS

---

- **Languages:** C++, JavaScript, HTML, CSS.
- **Coursework:** Data Structures, Object Oriented Programming, Operating System.
- **Framework & Tools:** Node.js, Git, Docker, Heroku, VS Code.
- **Databases:** MongoDB, PostgreSQL..
- **Certifications:** Google Cybersecurity Certificate

## WORK EXPERIENCE

---

**Lowe's- Associate**

**April 2024-Present**

- Collaborated with the team to efficiently fulfill orders and provide excellent customer service.
- Fulfilled in-store and online customer orders with a focus on speed and accuracy
- Collaborated with teammates to streamline order management and improve service
- Gained experience with retail technology and inventory systems

**Community Assistant, CU Boulder Housing**

**Aug, 2019 - Dec 2022**

- Served as a role model and peer resource for on-campus residents.
- Led community-building initiatives to support over 100 students.
- Worked closely with campus leadership to ensure a safe and supportive environment.

## PROJECTS

---

**Calendar Project** [OBB]

- Engineered a user-friendly and secure application with an optimized relational database schema.
- Integrated external calendar APIs to streamline event creation and management.
- Implemented robust security protocols, conducted extensive testing, and delivered responsive user support to ensure a seamless user experience.

**School Simulation Project**

- Designed a comprehensive scheduling system to simulate realistic school day operations.
- Programmed a C++ simulation modeling teachers, students, and custodians as distinct, interactive entities.
- Simulated dynamic school scenarios with a focus on accurate behavior modeling and validated performance through rigorous testing.

**Pokémon Project**

- Built a C++-based Pokémon game to apply core data structure principles in a hands-on environment.
- Simulated a functioning Pokémon world with battle mechanics, trainer logic, and interactive gameplay.
- Utilized various data structures to represent Pokémon attributes, map elements, and game logic.
